Test Date	27/11/2022
Test Time	4:30 PM - 6:30 PM
Subject	CAT 2022

Note - Answer Keys provided in this candidate response sheet are provisional.

Section : **VARC**

Comprehension:

The passage below is accompanied by a set of questions. Choose the best answer to each question.

Sociologists working in the Chicago School tradition have focused on how rapid or dramatic social change causes increases in crime. Just as Durkheim, Marx, Toennies, and other European sociologists thought that the rapid changes produced by industrialization and urbanization produced crime and disorder, so too did the Chicago School theorists. The location of the University of Chicago provided an excellent opportunity for Park, Burgess, and McKenzie to study the social ecology of the city. Shaw and McKay found . . . that areas of the city characterized by high levels of social disorganization had higher rates of crime and delinquency.

In the 1920s and 1930s Chicago, like many American cities, experienced considerable immigration. Rapid population growth is a disorganizing influence, but growth resulting from in-migration of very different people is particularly disruptive. Chicago's in-migrants were both native-born whites and blacks from rural areas and small towns, and foreign immigrants. The heavy industry of cities like Chicago, Detroit, and Pittsburgh drew those seeking opportunities and new lives. Farmers and villagers from America's hinterland, like their European cousins of whom Durkheim wrote, moved in large numbers into cities. At the start of the twentieth century, Americans were predominately a rural population, but by the century's mid-point most lived in urban areas. The social lives of these migrants, as well as those already living in the cities they moved to, were disrupted by the differences between urban and rural life. According to social disorganization theory, until the social ecology of the "new place" can adapt, this rapid change is a criminogenic influence. But most rural migrants, and even many of the foreign immigrants to the city, looked like and eventually spoke the same language as the natives of the cities into which they moved. These similarities allowed for more rapid social integration for these migrants than was the case for African Americans and most foreign immigrants.

In these same decades America experienced what has been called "the great migration": the massive movement of African Americans out of the rural South and into northern (and some southern) cities. The scale of this migration is one of the most dramatic in human history. These migrants, unlike their white counterparts, were not integrated into the cities they now called home. In fact, most American cities at the end of the twentieth century were characterized by high levels of racial residential segregation . . . Failure to integrate these migrants, coupled with other forces of social disorganization such as crowding, poverty, and illness, caused crime rates to climb in the cities, particularly in the segregated wards and neighborhoods where the migrants were forced to live.

Foreign immigrants during this period did not look as dramatically different from the rest of the population as blacks did, but the migrants from eastern and southern Europe who came to American cities did not speak English, and were frequently Catholic, while the native born were mostly Protestant. The combination of rapid population growth with the diversity of those moving into the cities created what the Chicago School sociologists called social disorganization. **SubQuestion No : 1**

Q.1 Which one of the following is not a valid inference from the passage?

Ans   ✔   1.   According to social disorganisation theory, the social integration of African Americanmigrants into Chicago was slower because they were less organised.

✘   2. The differences between urban and rural lifestyles were crucial factors in thedisruption experienced by migrants to American cities.

✘   3. The failure to integrate in-migrants, along with social problems like poverty, was asignificant reason for the rise in crime in American cities.

✘   4. According to social disorganisation theory, fast-paced social change provides fertileground for the rapid growth of crime.

The combination of rapid population growth with the diversity of those moving into the cities created what the Chicago School sociologists called social disorganization. **SubQuestion No : 3**

Q.3 A fundamental conclusion by the author is that:

Ans   ✔ 1. rapid population growth and demographic diversity give rise to social disorganisation that can feed the growth of crime.

✗ 2. according to European sociologists, crime in America is mainly in Chicago.

✗ 3. to prevent crime, it is important to maintain social order through maintaining socialsegregation.

✗ 4. the best circumstances for crime to flourish are when there are severe racialdisparities.

Q.4 **Which one of the following sets of words/phrases best encapsulates the issues discussed in the passage?**

Ans ❌ 1. Chicago School; Native-born Whites; European immigrants; Poverty

❌ 2. Rapid population growth; Heavy industry; Segregation; Crime

❌ 3. Durkheim; Marx; Toennies; Shaw

✔️ 4. Chicago School; Social organisation; Migration; Crime

Question Type :	**MCQ**
Question ID :	**48916815323**
Status :	**Answered**
Chosen Option :	**2**

Comprehension:

The passage below is accompanied by a set of questions. Choose the best answer to each question.

Interpretations of the Indian past . . . were inevitably influenced by colonial concerns and interests, and also by prevalent European ideas about history, civilization and the Orient. Orientalist scholars studied the languages and the texts with selected Indian scholars, but made little attempt to understand the world-view of those who were teaching them. The readings therefore are something of a disjuncture from the traditional ways of looking at the Indian past. . . .

Orientalism [which we can understand broadly as Western perceptions of the Orient] fuelled the fantasy and the freedom sought by European Romanticism, particularly in its opposition to the more disciplined Neo-Classicism. The cultures of Asia were seen as bringing a new Romantic paradigm. Another Renaissance was anticipated through an acquaintance with the Orient, and this, it was thought, would be different from the earlier Greek Renaissance. It was believed that this Oriental Renaissance would liberate European thought and literature from the increasing focus on discipline and rationality that had followed from the earlier Enlightenment. . . . [The Romantic English poets, Wordsworth and Coleridge,] were apprehensive of the changes introduced by industrialization and turned to nature and to fantasies of the Orient.

However, this enthusiasm gradually changed, to conform with the emphasis later in the nineteenth century on the innate superiority of European civilization. Oriental civilizations were now seen as having once been great but currently in decline. The various phases of Orientalism tended to mould European understanding of the Indian past into a particular pattern. . . . There was an attempt to formulate Indian culture as uniform, such formulations being derived from texts that were given priority. The so-called 'discovery' of India was largely through selected literature in Sanskrit. This interpretation tended to emphasize non-historical aspects of Indian culture, for example the idea of an unchanging continuity of society and religion over 3,000 years; and it was believed that the Indian pattern of life was so concerned with metaphysics and the subtleties of religious belief that little attention was given to the more tangible aspects.

German Romanticism endorsed this image of India, and it became the mystic land for many Europeans, where even the most ordinary actions were imbued with a complex symbolism. This was the genesis of the idea of the spiritual east, and also, incidentally, the refuge of European intellectuals seeking to distance themselves from the changing patterns of their own societies. A dichotomy in values was maintained, Indian values being described as 'spiritual' and European values as 'materialistic', with little attempt to juxtapose these values with the reality of Indian society. This theme has been even more firmly endorsed by a section of Indian opinion during the last hundred years.

It was a consolation to the Indian intelligentsia for its perceived inability to counter the technical superiority of the west, a superiority viewed as having enabled Europe to colonize Asia and other parts of the world. At the height of anti-colonial nationalism it acted as a salve for having been made a colony of Britain.

SubQuestion No : 5

Q.5 **It can be inferred from the passage that the author is not likely to support the view that:**

Ans ✗ 1. the Orientalist view of Asia fired the imagination of some Western poets.

✗ 2. India's culture has evolved over the centuries.

✓ 3. India became a colony although it matched the technical knowledge of the West.

✗ 4. Indian culture acknowledges the material aspects of life.

Comprehension:

The passage below is accompanied by a set of questions. Choose the best answer to each question.

Interpretations of the Indian past . . . were inevitably influenced by colonial concerns and interests, and also by prevalent European ideas about history, civilization and the Orient. Orientalist scholars studied the languages and the texts with selected Indian scholars, but made little attempt to understand the world-view of those who were teaching them. The readings therefore are something of a disjuncture from the traditional ways of looking at the Indian past. . . .

Orientalism [which we can understand broadly as Western perceptions of the Orient] fuelled the fantasy and the freedom sought by European Romanticism, particularly in its opposition to the more disciplined Neo-Classicism. The cultures of Asia were seen as bringing a new Romantic paradigm. Another Renaissance was anticipated through an acquaintance with the Orient, and this, it was thought, would be different from the earlier Greek Renaissance. Q.8 In the context of the passage, all of the following statements are true EXCEPT:

Ans ✗ 1. Indian texts influenced Orientalist scholars.

✔ 2. India's spiritualism served as a salve for European colonisers.

✗ 3. Orientalist scholarship influenced Indians.

✗ 4. Orientalists' understanding of Indian history was linked to colonial concerns.

Comprehension:

The passage below is accompanied by a set of questions. Choose the best answer to each question.

As software improves, the people using it become less likely to sharpen their own know-how. Applications that offer lots of prompts and tips are often to blame; simpler, less solicitous programs push people harder to think, act and learn.

Ten years ago, information scientists at Utrecht University in the Netherlands had a group of people carry out complicated analytical and planning tasks using either rudimentary software that provided no assistance or sophisticated software that offered a great deal of aid. The researchers found that the people using the simple software developed better strategies, made fewer mistakes and developed a deeper aptitude for the work. The people using the more advanced software, meanwhile, would often "aimlessly click around" when confronted with a tricky problem. The supposedly helpful software actually short-circuited their thinking and learning.

[According to] philosopher Hubert Dreyfus . . . . our skills get sharper only through practice, when we use them regularly to overcome different sorts of difficult challenges. The goal of modern software, by contrast, is to ease our way through such challenges. Arduous, painstaking work is exactly what programmers are most eager to automate—after all, that is where the immediate efficiency gains tend to lie. In other words, a fundamental tension ripples between the interests of the people doing the automation and the interests of the people doing the work.

Nevertheless, automation's scope continues to widen. With the rise of electronic health records, physicians increasingly rely on software templates to guide them through patient exams. The programs incorporate valuable checklists and alerts, but they also make medicine more routinized and formulaic—and distance doctors from their patients. . . . Harvard Medical School professor Beth Lown, in a 2012 journal article . . . warned that when doctors become "screen-driven," following a computer's prompts rather than "the patient's narrative thread," their thinking can become constricted. In the worst cases, they may miss important diagnostic signals. . . .

In a recent paper published in the journal Diagnosis, three medical researchers . . . examined the misdiagnosis of Thomas Eric Duncan, the first person to die of Ebola in the U.S., at Texas Health Presbyterian Hospital Dallas. They argue that the digital templates used by the hospital's clinicians to record patient information probably helped to induce a kind of tunnel vision. "These highly constrained tools," the researchers write, "are optimized for data capture but at the expense of sacrificing their utility for appropriate triage and diagnosis, leading users to miss the forest for the trees." Medical software, they write, is no "replacement for basic history-taking, examination skills, and critical thinking." . . .

There is an alternative. In "human-centered automation," the talents of people take precedence. . . . In this model, software plays an essential but secondary role. It takes over routine functions that a human operator has already mastered, issues alerts when unexpected situations arise, provides fresh information that expands the operator's perspective and counters the biases that often distort human thinking. The technology becomes the expert's partner, not the expert's replacement.

SubQuestion No : 9

Q.9 It can be inferred that in the Utrecht University experiment, one group of people was "aimlessly clicking around" because:

Ans   ✔ 1. they were hoping that the software would help carry out the tasks.

✘ 2. they wanted to avoid making mistakes.

✘ 3. they did not have the skill-set to address complicated tasks.

✘ 4. the other group was carrying out the tasks more efficiently.

It takes over routine functions that a human operator has already mastered, issues alerts when unexpected situations arise, provides fresh information that expands the operator's perspective and counters the biases that often distort human thinking. The technology becomes the expert's partner, not the expert's replacement.

SubQuestion No : 10

Q.10 In the context of the passage, all of the following can be considered examples of humancentered automation EXCEPT:

Ans ✔ 1. software that auto-completes text when the user writes an email.

✘ 2. software that offers interpretations when requested by the human operator.

✘ 3. medical software that provides optional feedback on the doctor's analysis of the medical situation.

✘ 4. a smart-home system that changes the temperature as instructed by the resident.

Question Type :	**MCQ**
Question ID :	**48916815201**
Status :	**Answered**
Chosen Option :	**2**

Comprehension:

The passage below is accompanied by a set of questions. Choose the best answer to each question.

As software improves, the people using it become less likely to sharpen their own know-how. Applications that offer lots of prompts and tips are often to blame; simpler, less solicitous programs push people harder to think, act and learn.

Ten years ago, information scientists at Utrecht University in the Netherlands had a group of people carry out complicated analytical and planning tasks using either rudimentary software that provided no assistance or sophisticated software that offered a great deal of aid. The researchers found that the people using the simple software developed better strategies, made fewer mistakes and developed a deeper aptitude for the work. The people using the more advanced software, meanwhile, would often "aimlessly click around" when confronted with a tricky problem. The supposedly helpful software actually short-circuited their thinking and learning.

[According to] philosopher Hubert Dreyfus . . . . our skills get sharper only through practice, when we use them regularly to overcome different sorts of difficult challenges. The goal of modern software, by contrast, is to ease our way through such challenges. Arduous, painstaking work is exactly what programmers are most eager to automate—after all, that is where the immediate efficiency gains tend to lie. In other words, a fundamental tension ripples between the interests of the people doing the automation and the interests of the people doing the work.

Nevertheless, automation's scope continues to widen. With the rise of electronic health records, physicians increasingly rely on software templates to guide them through patient exams. The programs incorporate valuable checklists and alerts, but they also make medicine more routinized and formulaic—and distance doctors from their patients. . . . Harvard Medical School professor Beth Lown, in a 2012 journal article . . . warned that when doctors become "screen-driven," following a computer's prompts rather than "the patient's narrative thread," their thinking can become constricted. In the worst cases, they may miss important diagnostic signals. . . .

In a recent paper published in the journal Diagnosis, three medical researchers . . . examined the misdiagnosis of Thomas Eric Duncan, the first person to die of Ebola in the U.S., at Texas Health Presbyterian Hospital Dallas. They argue that the digital templates used by the hospital's clinicians to record patient information probably helped to induce a kind of tunnel vision. "These highly constrained tools," the researchers write, "are optimized for data capture but at the expense of sacrificing their utility for appropriate triage and diagnosis, leading users to miss the forest for the trees." Medical software, they write, is no "replacement for basic history-taking, examination skills, and critical thinking." . . .

There is an alternative. In "human-centered automation," the talents of people take precedence. . . . In this model, software plays an essential but secondary role. It takes over routine functions that a human operator has already mastered, issues alerts when unexpected situations arise, provides fresh information that expands the operator's perspective and counters the biases that often distort human thinking. The technology becomes the expert's partner, not the expert's replacement.

SubQuestion No : 11

Q.11 From the passage, we can infer that the author is apprehensive about the use of

sophisticated automation for all of the following reasons EXCEPT that: Ans ✗ 1. it could mislead people.

✗ 2. it stunts the development of its users.

✗ 3. it stops users from exercising their minds.

✔ 4. computers could replace humans.

The technology becomes the expert's partner, not the expert's replacement.

SubQuestion No : 12

Q.12 In the Ebola misdiagnosis case, we can infer that doctors probably missed the forest for the trees because:

Ans ✗ 1. they used the wrong type of digital templates for the case.

✔ 2. they were led by the data processed by digital templates.

✗ 3.   the digital templates forced them to acquire tunnel vision.

✗ 4.   the data collected were not sufficient for appropriate triage.

Question Type :	**MCQ**
Question ID :	**48916815204**
Status :	**Not Answered**
Chosen Option :	**--**

Comprehension:

The passage below is accompanied by a set of questions. Choose the best answer to each question.

Nature has all along yielded her flesh to humans. First, we took nature's materials as food, fibers, and shelter. Then we learned to extract raw materials from her biosphere to create our own new synthetic materials. Now Bios is yielding us her mind—we are taking her logic.

Clockwork logic—the logic of the machines—will only build simple contraptions. Truly complex systems such as a cell, a meadow, an economy, or a brain (natural or artificial) require a rigorous nontechnological logic. We now see that no logic except bio-logic can assemble a thinking device, or even a workable system of any magnitude.

It is an astounding discovery that one can extract the logic of Bios out of biology and have something useful. Although many philosophers in the past have suspected one could abstract the laws of life and apply them elsewhere, it wasn't until the complexity of computers and human-made systems became as complicated as living things, that it was possible to prove this. It's eerie how much of life can be transferred. So far, some of the traits of the living that have successfully been transported to mechanical systems are: self-replication, selfgovernance, limited self-repair, mild evolution, and partial learning.

We have reason to believe yet more can be synthesized and made into something new. Yet at the same time that the logic of Bios is being imported into machines, the logic of Technos is being imported into life. The root of bioengineering is the desire to control the organic long enough to improve it. Domesticated plants and animals are examples of technos-logic applied to life. The wild aromatic root of the Queen Anne's lace weed has been fine-tuned over generations by selective herb gatherers until it has evolved into a sweet carrot of the garden; the udders of wild bovines have been selectively enlarged in a "unnatural" way to satisfy humans rather than calves. Milk cows and carrots, therefore, are human inventions as much as steam engines and gunpowder are. But milk cows and carrots are more indicative of the kind of inventions humans will make in the future: products that are grown rather than manufactured.

Genetic engineering is precisely what cattle breeders do when they select better strains of Holsteins, only bioengineers employ more precise and powerful control. While carrot and milk cow breeders had to rely on diffuse organic evolution, modern genetic engineers can use directed artificial evolution—purposeful design—which greatly accelerates improvements.

The overlap of the mechanical and the lifelike increases year by year. Part of this bionic convergence is a matter of words. The meanings of "mechanical" and "life" are both stretching until all complicated things can be perceived as machines, and all self-sustaining machines can be perceived as alive. Yet beyond semantics, two concrete trends are happening: (1) Human-made things are behaving more lifelike, and (2) Life is becoming more engineered. The apparent veil between the organic and the manufactured has crumpled to reveal that the two really are, and have always been, of one being.

SubQuestion No : 13

Q.13 The author claims that, "Part of this bionic convergence is a matter of words". Which one of the following statements best expresses the point being made by the author?

✗ **Ans** 1. "Bios" and "Technos" are both convergent forms of logic, but they generate meanings about the world that are mutually exclusive.

✗ 2. "Mechanical" and "life" are words from different logical systems and are, therefore,fundamentally incompatible in meaning.

✓ 3. "Mechanical" and "life" were earlier seen as opposite in meaning, but the differencebetween the two is increasingly blurred.

✗ 4. A bionic convergence indicates the meeting ground of genetic engineering andartificial intelligence.

Q.18 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

"It does seem to me that the job of comedy is to offend, or have the potential to offend, and it cannot be drained of that potential," Rowan Atkinson said of cancel culture. "Every joke has a victim. That's the definition of a joke. Someone or something or an idea is made to look ridiculous." The Netflix star continued, "I think you've got to be very, very careful about saying what you're allowed to make jokes about. You've always got to kick up? Really?" He added, "There are lots of extremely smug and self-satisfied people in what would be deemed lower down in society, who also deserve to be pulled up. In a proper free society, you should be allowed to make jokes about absolutely anything."

✗ **Ans** 1. Every joke needs a victim and one needs to include people from lower down the society and not just the upper class.

✔ 2. All jokes target someone and one should be able to joke about anyone in the society, which is inconsistent with cancel culture.

✗ 3. Cancel culture does not understand the role and duty of comedians, which is to deride and mock everyone.

✗ 4. Victims of jokes must not only be politicians and royalty, but also arrogant people from lower classes should be mentioned by comedians.

Q.19 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

To defend the sequence of alphabetisation may seem bizarre, so obvious is its application that it is hard to imagine a reference, catalogue or listing without it. But alphabetical order was not an immediate consequence of the alphabet itself. In the Middle Ages, deference for ecclesiastical tradition left scholars reluctant to categorise things according to the alphabet — to do so would be a rejection of the divine order. The rediscovery of the ancient Greek and Roman classics necessitated more efficient ways of ordering, searching and referencing texts. Government bureaucracy in the 16th and 17th centuries quickened the advance of alphabetical order, bringing with it pigeonholes, notebooks and card indexes.

✗ **Ans**1. Unlike the alphabet, once the efficacy of the alphabetic sequence became apparent to scholars and administrators, its use became widespread.

✗ 2. While adoption of the written alphabet was easily accomplished, it took scholarsseveral centuries to accept the alphabetic sequence as a useful tool in their work.

✔ 3. The alphabetic order took several centuries to gain common currency because ofreligious beliefs and a lack of appreciation of its efficacy in the ordering of things.

✗ 4. The ban on the use by scholars of any form of categorisation - but the divinelyordained one - delayed the adoption of the alphabetic sequence by several centuries.

Q.21 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

Tamsin Blanchard, curator of Fashion Open Studio, an initiative by a campaign group showcasing the work of ethical designers says, "We're all drawn to an exquisite piece of embroidery, a colourful textile or even a style of dressing that might have originated from another heritage. [But] this magpie mentality, where all of culture and history is up for grabs as 'inspiration', has accelerated since the proliferation of social media... Where once a fashion student might research the history and traditions of a particular item of clothing with care and respect, we now have a world where images are lifted from image libraries without a care for their cultural significance. It's easier than ever to steal a motif or a craft technique and transfer it on to a piece of clothing that is either mass produced or appears on a runway without credit or compensation to their original communities."

✗ **Ans** 1. Media has encouraged mass production; images are copied effortlessly without care or concern for the interests of ethnic communities.

✗   2.   Cultural collaboration is the need of the hour. Beautiful design ideas of indigenouspeople need to be showcased and shared worldwide.

✔   3.   Taking fashion ideas from any cultural group without their consent is a form ofappropriation without giving due credit, compensation, and respect.

✗   4.   Copying an embroidery design or pattern of textile from native communities who ownthem is tantamount to stealing and they need to be compensated.

In the following, a year corresponds to 1 st of January of that year.

A study to determine the mortality rate for a disease began in 1980. The study chose 1000 males and 1000 females and followed them for forty years or until they died, whichever came first. The 1000 males chosen in 1980 consisted of 250 each of ages 10 to less than 20, 20 to less than 30, 30 to less than 40, and 40 to less than 50. The 1000 females chosen in 1980 also consisted of 250 each of ages 10 to less than 20, 20 to less than 30, 30 to less than 40, and 40 to less than 50.

The four figures below depict the age pro file of those among the 2000 individuals who were still alive in 1990, 2000, 2010, and 2020. The blue bars in each figure represent the number of males in each age group at that point in time, while the pink bars represent the number of females in each age group at that point in time. The numbers next to the bars give the exact numbers being represented by the bars. For example, we know that 230 males among those tracked and who were alive in 1990 were aged between 20 and 30.

SubQuestion No : 1

Q.1 **In 2000, what was the ratio of the number of dead males to dead females among those being tracked?**

Ans   ✓ 1. 71 : 69

✗ 2. 109 : 107

✗ 3. 129 : 131

✗ 4. 41 : 43

Given **40**
Answer :

Question Type :	**SA**
Question ID :	**48916815380**
Status :	**Answered**

Comprehension:

Pulak, Qasim, Ritesh, and Suresh participated in a tournament comprising of eight rounds. In each round, they formed two pairs, with each of them being in exactly one pair. The only restriction in the pairing was that the pairs would change in successive rounds. For example, if Pulak formed a pair with Qasim in the first round, then he would have to form a pair with Ritesh or Suresh in the second round. He would be free to pair with Qasim again in the third round. In each round, each pair decided whether to play the game in that round or not. If they decided not to play, then no money was exchanged between them. If they decided to play, they had to bet either ₹1 or ₹2 in that round. For example, if they chose to bet ₹2, then the player winning the game got ₹2 from the one losing the game.

At the beginning of the tournament, the players had ₹10 each. The following table shows partial information about the amounts that the players had at the end of each of the eight rounds. It shows every time a player had ₹10 at the end of a round, as well as every time, at the end of a round, a player had either the minimum or the maximum amount that he would have had across the eight rounds. For example, Suresh had ₹10 at the end of Rounds 1, 3, and 8 and not after any of the other rounds. The maximum amount that he had at the end of any round was ₹13 (at the end of Round 5), and the minimum amount he had at the end of any round was ₹8 (at the end of Round 2). At the end of all other rounds, he must have had either ₹9, ₹11, or ₹12.

It was also known that Pulak and Qasim had the same amount of money with them at the end of Round 4.

	Pulak	Qasim	Ritesh	Suresh
Round 1		₹8	₹10	₹10
Round 2	₹13	₹10		₹8
Round 3				₹10
Round 4				
Round 5	₹10	₹10		₹13
Round 6				
Round 7		₹12	₹4	
Round 8	₹13			₹10

SubQuestion No : 6

Q.6 What BEST can be said about the amount of money that Ritesh had with him at the end of Round 8?

Ans ✗ 1. Exactly ₹5

   ✔ 2. Exactly ₹6

   ✗ 3. ₹5 or ₹6

   ✗ 4. ₹4 or ₹5

Q.1 Which of the following pairings was made in Round 5?
0

Ans ✔️ 1. Pulak and Suresh

  ❌ 2. Pulak and Qasim

  ❌ 3. Qasim and Suresh

  ❌ 4. Pulak and Ritesh

Comprehension:

There are only four neighbourhoods in a city - Levmisto, Tyhrmisto, Pesmisto and Kitmisto. During the onset of a pandemic, the number of new cases of a disease in each of these neighbourhoods was recorded over a period of five days. On each day, the number of new cases recorded in any of the neighbourhoods was either 0, 1, 2 or 3.

The following facts are also known:

1. There was at least one new case in every neighbourhood on Day 1.
2. On each of the five days, there were more new cases in Kitmisto than in Pesmisto.
3. The number of new cases in the city in a day kept increasing during the five-day period. The number of new cases on Day 3 was exactly one more than that on Day 2.
4. The maximum number of new cases in a day in Pesmisto was 2, and this happened onlyonce during the five-day period.
5. Kitmisto is the only place to have 3 new cases on Day 2.
6. The total numbers of new cases in Levmisto, Tyhrmisto, Pesmisto and Kitmisto over thefive-day period were 12, 12, 5 and 14 respectively.

SubQuestion No : 11

Q.11 What BEST can be concluded about the total number of new cases in the city on Day 2?

Ans   ✗ 1. Exactly 7

    ✔ 2. Exactly 8

    ✗ 3. Either 6 or 7

    ✗ 4. Either 7 or 8

Ans   ✘ 1. 4

       ✘ 2. 2

       ✔ 3. 5

       ✘ 4. 3

Comprehension:

All the first-year students in the computer science (CS) department in a university take both the courses (i) AI and (ii) ML. Students from other departments (non-CS students) can also take one of these two courses, but not both. Students who fail in a course get an F grade; others pass and are awarded A or B or C grades depending on their performance. The following are some additional facts about the number of students who took these two courses this year and the grades they obtained.

1.   The numbers of non-CS students who took AI and ML were in the ratio 2 : 5.
2.   The number of non-CS students who took either AI or ML was equal to the number of CSstudents.
3.   The numbers of non-CS students who failed in the two courses were the same and theirtotal is equal to the number of CS students who got a C grade in ML.
4.   In both the courses, 50% of the students who passed got a B grade. But, while the numbersof students who got A and C grades were the same for AI, they were in the ratio 3 : 2 for ML.
5.   No CS student failed in AI, while no non-CS student got an A grade in AI.
6.   The numbers of CS students who got A, B and C grades respectively in AI were in the ratio 3 : 5 : 2, while in ML the ratio was 4 : 5 : 2.
7.   The ratio of the total number of non-CS students failing in one of the two courses to thenumber of CS students failing in one of the two courses was 3 : 1.
8.   30 students failed in ML.

SubQuestion No : 16 Q.16

nany students took AI?

✔ 1. 270

✘ 2. 60

✘ 3. 210

✘ 4. 90

Ans

Comprehension:

All the first-year students in the computer science (CS) department in a university take both the courses (i) AI and (ii) ML. Students from other departments (non-CS students) can also take one of these two courses, but not both. Students who fail in a course get an F grade; others pass and are awarded A or B or C grades depending on their performance. The following are some additional facts about the number of students who took these two courses this year and the grades they obtained.

1.   The numbers of non-CS students who took AI and ML were in the ratio 2 : 5.
2.   The number of non-CS students who took either AI or ML was equal to the number of CSstudents.
3.   The numbers of non-CS students who failed in the two courses were the same and theirtotal is equal to the number of CS students who got a C grade in ML.
4.   In both the courses, 50% of the students who passed got a B grade. But, while thenumbers of students who got A and C grades were the same for AI, they were in the ratio 3 : 2 for ML.
5.   No CS student failed in AI, while no non-CS student got an A grade in AI.
6.   The numbers of CS students who got A, B and C grades respectively in AI were in theratio 3 : 5 : 2, while in ML the ratio was 4 : 5 : 2.
7.   The ratio of the total number of non-CS students failing in one of the two courses to thenumber of CS students failing in one of the two courses was 3 : 1.
8.   30 students failed in ML.

SubQuestion No : 17

Q.17   How many CS students failed in ML?

Case Sensitivity: No

Answer Type: Equal

Possible Answer: 12
